| DSE Control Panel | |
| <p>DSE7320 is an advanced control module based on micro-processor, It is an Auto Mains (Utility) Failure Control Module(AMF), have been designed to start and stop generating sets that include electronic And non-electronic engines. Include the additional capability of being able to monitor a mains (utility) supply. when main is not available, It can automatically start the engine and close generating sets breaker automatically, Accurately measure various operational parameters and display all values and alarms information on the LCD. In additional, it can automatically open breaker, and shutdown the engine after the main supply recovers.</p> | |
| The control module display <ul style="list-style-type: none">• Generator voltage• Generator frequency• Battery voltage• Engine speed• Load current• Generator KVA, KW, PF• Engine run-time Hours• Engine oil pressure• Engine coolant temperature• Real time clock for time and date, overall runtime | Main Features <ul style="list-style-type: none">• AMF and ATS and communication and expansion function• Designed to work with electronic or non-electronic or gas engine simultaneously. (support many kinds of engines ECU).• Manual, Automatic, Test and remote control mode selectable.• Monitoring and measuring operational parameters of the mains supply and genset.• Indicating operation status, fault conditions, all parameters and alarms• Multiple protections and multiple parameters display.• Includes 12 inputs and eight outputs. 8 inputs are configurable and 4 outputs are configurable.• Can be programmed using the front panel or by using the PC software.• Support twelve languages. The language was edited by customer.• Graded protection: pre-alarm, shutdown and electrical trip, flexible setting.• The module can be pre-set for four operating modes and protecting parameters.• Add DSE860 or DSE865 module, internet network monitoring can be realized.• The firmware can be updated automatically, so customer can have the latest version. |
